Security

- Fix missing braces
- Fixable issues with private constructors
- Locals should full
- Fixable private fields
- Fix C-style array declarations
- Use dashed operator
- Explicit initialization
- Simplify ternary blocks to expressions
- Remove unnecessary parentheses

Fix missing braces

Fixing missing braces across code such as single line if, for, while, and do...

Stop new issues coming in on PRs

The screenshot displays a GitHub pull request interface. At the top, a review by **github-actions** (bot) is shown, dated "reviewed 2 weeks ago". A link "View reviewed changes" is present. Below this, a code diff for `src/test/java/org/openrewrite/java/testing/cleanup/RemoveTestPrefixTest.java` is shown, marked as "Outdated". The diff includes lines 327 to 330, with a green highlight on the new code: `@Test @Issue("https://github.com/openrewrite/rewrite-testing-frameworks/issues/258") void testRemoveTestPrefixWithClashingMethod() {`. Below the diff, a "Suggested change" box shows a diff where `testRemoveTestPrefixWithClashingMethod()` is replaced by `removeTestPrefixWithClashingMethod()`. A "Commit suggestion" button is at the bottom right of this box. Below the suggested change is a "Reply..." input field. At the bottom of the review section, a button "Unresolve conversation" is next to the text "timtebeek marked this conversation as resolved." Below the review section, a commit summary shows "Apply suggestions from code review" with a "Verified" status and commit hash `097cfa3`. At the very bottom, a merge summary shows "timtebeek merged commit 30f357c into main 2 weeks ago" with "1 of 2 checks passed" and buttons for "View details" and "Revert".
