Stop new issues coming in on PRs

The screenshot displays a GitHub pull request interface. At the top, a review by the **github-actions** bot is shown, dated "2 weeks ago". The review is for the file `src/test/java/org/openrewrite/java/testing/cleanup/RemoveTestPrefixTest.java`, which is marked as "Outdated". The review highlights a code change from line 327 to 330, showing the addition of a `@Test` annotation and an `@Issue` reference to a GitHub issue, along with a change in the method name from `testRemoveTestPrefixWithClashingMethod` to `removeTestPrefixWithClashingMethod`.

Below the review, a "Suggested change" box shows the diff: a red line for the removal of `void testRemoveTestPrefixWithClashingMethod() {` and a green line for the addition of `void removeTestPrefixWithClashingMethod() {`. A "Commit suggestion" button is visible.

At the bottom, a merge by **timtebeek** is shown, dated "2 weeks ago". The merge message is "merged commit 30f357c into main". It includes a "View details" button and a "Revert" button. A status bar at the bottom indicates "1 of 2 checks passed".
